Amongst the new features, it's now easier to manage, organize, and archive your photos with features like Tags, Collections, and Catalogs. In addition, you're able to share your images directly to social networks like Facebook, Twitter and Flickr. These features are the result of algorithmic and AI artificial intelligence improvements. If you haven't got the right software for the work you do, it's likely you won't turn out the best that you can be. You can make your work stand out from the crowd and impress your clients and fellow colleagues by learning to use the new features of Adobe Photoshop. In addition to incorporating new features, including some of the new video editing processes we talked about earlier, Photoshop also has a handful of performance improvements. The Photoshop applications for Android customers were updated last July to add support for Dark Mode options, better support for the extended Unicode character set (up to cover more than 1 billion characters) and some performance upgrades, among other changes. 2018 saw the release of Photoshop on iOS, and 2019 brought color-correcting adjustments in Camera Raw to the iPhone and iPad, as well as a bunch of new layering tools and content-aware masking within After Effects. To begin, you can see the final release of the updated workflow document, now featuring the updates we previewed in this article, and the tools we mentioned throughout the post. This new document includes streamlined workflow guides, a simplified user experience, and more information in the keyboard shortcuts panel. The workflow selection now includes the new generation of defaults, which takes into account the settings from the new Photoshop 10 design and display defaults. You'll notice that there are some changes to the keyboard shortcuts panel, especially in the section titled "New Tools for Advanced Selection." We can't wait to get our hands on Adobe Photoshop CC 2019, and have already taken the opportunity to start updating our toolbox of Photoshop selections to work with the myriad panel routines and options that came with the new release. We'll likely have much more to share in the coming months.

Designers and developers use the Adobe Analytics and Targeting services to track and monitor user behavior, including their online and mobile activities and new creative development to target audiences across social and mobile; and Facebook and Instagram, as well as other social media, for potential customers. Adobe Creative Suite users can now integrate their content with the latest social and activity analytics in Adobe Target. This integration provides features that help them understand the effectiveness of their creative content and enable them to create more relevant, personalized content to their consumer audiences. **Adobe Presenter**

Adobe Presenter, available as a plugin for Photoshop and Adobe Browser, is a software-based presentation capture, delivery, and sharing solution. It enables you to connect with a large audience from any device through the web and a set of pre-configured templates, and allow participants to collaborate in real time. As of September 1 2020, Adobe Presenter will no longer be offered as a standalone product on the Adobe Browser and will be removed from the Adobe Browser. Access to content and tools will be available through a link on the Adobe Presenter page of the Adobe Browser. If you have an existing installation of Adobe Presenter currently configured to use the Adobe Browser, you will continue to have access to this product until it is removed from the Adobe Browser. This means you can continue to use it on your Mac, PC, and on iOS and Android devices. If you want to download Adobe Presenter, please visit the Adobe Browser website.
